IBM SkillsBuild

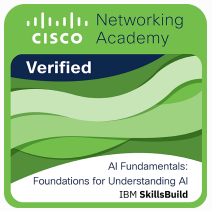

Statement of Achievement

Wondatir Hunegnaw

has successfully achieved student level credential for completing the AI Fundamentals: Foundations for Understanding AI course, provided by Cisco Networking Academy in collaboration with IBM SkillsBuild.

The graduate is able to proficiently:

- Describe the foundations of artificial intelligence, including its forms, eras of data processing, and data types.
- Differentiate human and machine intelligence by recognizing learning processes, machine capabilities, and applications of AI.
- Apply machine learning principles by using classical models and identifying learning types.
- Consider the impact of machine learning principles on AI accuracy and outputs.
- Explain how neural networks and deep learning function, including their learning processes and limitations.
- Identify issues of fairness and bias in neural networks and deep learning.
- Identify different forms of AI, including predictive, decision-making, computer vision, and generative AI.
- Determine appropriate applications for different forms of AI in everyday and professional contexts.
